

### Therapeutic hypothermia for HIE, where are we now?

- Good background maybe a little more on practical cooling for people in DGH's
- I felt hazy during the lecture but got the jist, needs more clarification of the aim
- Easy to follow. Interesting topic
- Well-presented and use of analogies increased understanding. Really easy to understand
- Very interesting in how this treatment may continue to develop over the next decade
- Excellent presentation and very informative
- Very interesting context for the rest of the day
- Useful to know current research, Good recap on previous cooling training

### Seizures: Recognition, diagnosis and treatment

- Interesting but very medically focused
- Very good presentation
- Session covered the main points thoroughly and was easy to follow
- Useful flow chart for new seizure guidelines
- Would be nice to receive a hand out copy of this lecture
- Relevant, interesting and well presented (to nurses)
- Very good
- Thorough and aimed at all levels of training
- Simple, covered all the points related to the topic and interactive
- Useful as at our unit we have had 3 babies admitted with ?seizures and discrepancy between medical and nursing staff as currently no CFM available to diagnose
- Could be a little louder

# Lectures AM

### Neurological Examination

- Important lecture to hear on the course, different but crucial. Maybe a little more on comparing abnormal to normal scans
- Felt that this was aimed more at Dr's, however it was interesting. (I didn't understand it all)
- Excellent presentation
- Enjoyed the lecture. Possibly could have spent more time on the subject. Very relevant to our unit as we have had several babies for neurological observation recently

### Neonatal Stroke

- Well delivered and contained relevant information, good pace. Would be beneficial to include other investigations apart from imaging that is needed for stroke.
- Excellent
- A clear explanation of what a neonatal stroke is
- Well presented, logical, very interesting
- Very precise, appropriate timing, interactive
- Knowledgeable speaker
- Very informative- information I didn't know about before the lecture but explained in a very straightforward way
- Extremely interesting, useful as not had a lecture purely about neonatal stroke

# Practical Skills

## aEEG Interpretation

- \* Good to recap on CFM traces as I haven't read any CFM's since my intensive care course
- \* Fantastic and to the point
- \* Very informative. Good explanation
- \* Good examples of normal and abnormal EEG monitoring

## Decision to cool

- \* Very well explained. Made you think
- \* Helpful for discussions with ANTS team
- \* Real life difficult decisions
- \* A good discussion. Very helpful
- \* Thoroughly enjoyed the discussion. It's not always obvious and this was addressed
- \* Good cases and discussion points

## aEEG Practical Skills

- \* Excellent. Really enjoyed this
- \* Helpful for clinical discussion
- \* Really good. I would feel comfortable to insert CFM needles into a baby now
- \* Good – all I needed to know
- \* I feel that more time and more examples would have been helpful

### What to tell the parents

- ◇ Useful. Lots to think about
- ◇ Good information
- ◇ Very interesting topic to discuss and very important
- ◇ Very helpful
- ◇ Very good speaker
- ◇ Needs more practical examples
- ◇ Not a great deal of discussion. Possibly could remove from the itinerary. I generally as a healthcare professional we tend to already address patient relatives within the scope of our knowledge

# Lectures PM

### Predicting Outcomes

- ◇ Still not clear about what to tell parents
- ◇ A good insight in what may come next
- ◇ I enjoyed this topic. I came away thinking 'not what the baby can't do but what the baby can do'
- ◇ Although interesting to see imaging, quite in-depth for nursing staff who do not interpret images, more appropriate for medical staff. Thoroughly enjoyed the lecturer's knowledge and delivery. I enjoyed Topun's lectures

# Overall Comments

- I am very glad that I attended today. It was an excellent day with very knowledgeable speakers
- Brilliant day, highly recommend
- More time on discussion of CFM monitoring and able to recognise patterns would be helpful
- Good course. Longer lunch break than 30 minutes 45 minutes is nice. Excellent course in general
- Very well organised course. Plenty of communication. Knowledgeable speakers. Practical sessions were particularly useful

- A very informative day. CFM is new to me and I felt that I could have benefited from more time in these areas. Overall an extremely interesting day
- Very good presentations and learnt some procedures on how to apply CFM leads. Good workshop
- Thank you

- I will definitely recommend this course to my colleagues. It is very informative and a very organised course
- Very informative, learned a lot. I am happy to tell my colleagues that it is a good course
- Really enjoyed the day, would recommend to other colleagues. Would have liked to go through setting up the cooling machine and how to attach the wrap to a baby
- I have no negative comments
- Great day!
