

Ventilation Study Day

Lectures

Early respiratory care

- * New learning for myself LISA-I would like to know more
- * Very useful to hear most recent updates and evidence. Interesting, will take back for discussion at local unit
- * Good to know recent evidence
- * Very interesting
- * Covered every aspect of learning, some information felt redundant but necessary for new starters
- * Well presented but wished that I had a bit more time to look at the slides
- * Very informative, good and clear presentation, good refresher
- * Clear, easy to follow. Combination of research and FHOC was informative. Thank you
- * Clear, informative. Very up to date research and guidelines

Pneumothorax

- * X-rays informative
- * Very informative
- * Well presented
- * Interesting, would of liked more x-rays
- * Very informative and interesting
- * Very helpful re-cap
- * Good presentation
- * More on positioning of baby with pneumothorax and no drain

Interpretation of neonatal blood gases

- * Shame presentation didn't work well as some participants chatted over some of the information Amie was trying to project
- * Good presentation
- * IT issues made it difficult for the lecture to flow. Lecturer dealt with it very professionally and managed to continue through with minimal disruption
- * Good to run through gases
- * Computer problems-no one's fault and well dealt with
- * Slightly confusing at end but did confirm my thinking about metabolic and respiratory
- * Made interpretations a bit easier

Ventilator Graphics

- * Very informative, could flow more and not apologise
- * Felt a bit rushed. Would like to look at more examples of screens
- * Could have had more time and examples
- * Very technical but useful information. More time needed
- * Found the gentleman used another persons presentation and may delivered it not in the way I learn best. He spent longer on areas not relevant to ventilator graphics to me

Ventilation Study Day

Workshops

Care of the infant with a chest drain

- Excellent
- Clear concise information
- Great opportunity to practice
- Very good opportunity to practice
- Very useful
- Excellent presentation-good style of teaching using practical sessions
- Good speaker and very useful to get hands on practice
- Good to have hands on experience
- Could have perhaps been better with two dolls to practice on as time went quickly but did learn lots
- Nice to put hands on something we wouldn't do in practice
- Excellent presentation and preparation
- Very useful to be able to have a go at the insertion of a chest drain. Highlighted the areas we could assist with
- Relaxed teaching approach, clear informative demonstration. Calm, practical way to remember insertion of chest drain. Excellent learning as able to actually insert drain/ practice
- Really good to perform procedure to fully understand nursing preparations needed
- Good refresher as we don't do chest drains often

Nursing care of the intubated infant

- Instructor unfamiliar with much of the equipment. Not structure to session-just left to look at equipment
- Excellent practical opportunity to intubate infant. Small teaching session, re: ETT position and nursing care of infant with ETT would be an added addition to the station
- Good to be able to practice different skills
- Presenter seemed to have no knowledge of the topic
- Brilliant intubation practice
- Good to practice intubation and see x-rays
- Practiced intubation with dolls. NO official guidance from teacher but good to trial equipment
- No structure or direction given for session. Good opportunity to practice hands on
- Disappointed in this session- more like teach yourself-no teaching included about how to intubate a baby, how to read x-rays one of the more experienced nurses in the group was showing people how to visualize the airway and vocal cords.
- Didn't really understand the aim of the session. Not enough equipment. Information on back of x-rays would have been helpful
- Didn't find this very helpful

Practical ventilation, modes and graphics

- Longer session would be helpful
- Would have been better if we had SLE
- More confused as so many different terminology used for modes of ventilation and demonstrating this on a ventilator not used on our unit didn't help
- Bit confusing as not the ventilator we use. Would have been helpful to have an SLE ventilator to play with
- Bit confusing at times with graphics ie:trigger breaths/ brain colour
- Extremely useful. Learned some tricks, I did not know! Wish it lasted longer
- Very in depth presentation
- Good opportunity to go through the ventilator and ask questions
- Good interactive session, great demonstrations. Thanks for the pen
- Very good explanation of ventilator, modes and troubleshooting. Good refresher

Ventilation Study Day

Overall Feedback

Great course. Will recommend to others!

- ◇ Very good. I did learn a lot. Thank you!
- ◇ Very enjoyable and well organised
- ◇ Excellent

- ◇ In introduction, mention that one person talk at a time no other conversations
- ◇ Introducing a surgical study day sounds interesting
- ◇ Way too much pre-course reading! Also most of this was dated!

- ◇ I would like this course to be divided in early basic ventilation and advanced ventilation for experienced QIS. Some information felt redundant for me, I would have used some more graphic reading lessons, x-ray interpretation and ventilator troubleshooting. Everything was well explained, well covered and interesting. Thank you for your hard work

- ◇ Excellent course, very well organised with a very friendly and approachable faculty. Learnt a lot and had an enjoyable day. Thank you
- ◇ Would be useful to have print outs of Power-Point presentations for not taking.
