

To comply with GDPR we have disabled the **import members** function from the network administrator toolbox. This means you will no longer be able to perform bulk imports of new members to your network.

To allow users to join your network, you will need to make your network homepage visible in search so that potential members can find and join your network.

- Click to the homepage of your network
- Go to the toolbox
- Select **Network admin tools**
- Select **Hide/show network**
- Select **Make this network visible to all**

Content can be made visible for network members only

Change the visibility of your network

Your network is currently visible to network members only

Do you want to:

- [Make this network visible to ALL »](#)
- [Make this network visible to existing members ONLY](#)
- [Make this network visible to network administrators ONLY »](#)
