Deep Difficult Implanon?

Fernville Surgery in Hemel Hempstead is one of the UK Network of Deep Implanon Removal Centres supported by the Faculty of Sexual & Reproductive Health Care*.

We can help!

We remove impalpable Implanon contraceptive implants under local anaesthetic using direct ultrasound guidance.

This is a much less traumatic solution for the woman than being referred into hospital, having multiple imaging attempts, often a GA and sometimes several unnecessary incisions leaving distressing scars on her arm.

It is also significantly cheaper for your PBC group/PCT.

If you come across an Implanon that is not palpable or not removable by the standard technique, then please refer to us in writing as below. We will need to approach your PBC group/PCT to confirm funding but, dependent on how long that takes, would aim to scan and operate on your patient within 4 weeks of referral.

We can take referrals from anywhere provided the patient is prepared to travel to Hemel Hempstead. In certain circumstances it might be possible to come to your area.
