

IN-UTERO TRANSFERS EXCEPTIONS TO CARE PATHWAYS 2014/15

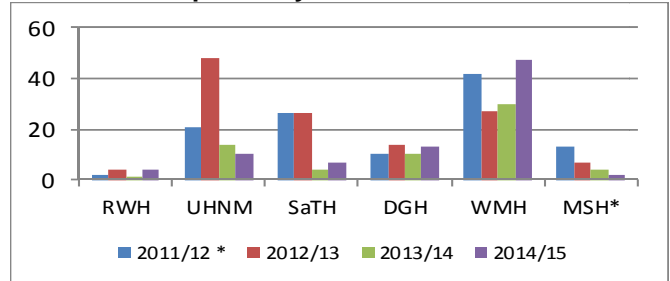

IUT exceptions to the care pathway continued to be reported by each individual Trust throughout 2014/15. There were 83 IUT exceptions reported last year, this is 20 more than in 2013/14, but remains lower than the previous 2 years (126 and 116 each reported in 2012/13 and 2011/12*).

*** NB. 2011/12 was the first year that IUT exception data was collected and was an incomplete year as UHNM data was only reported for the last four months of this year. MSH data is only for 9 months in 2014/15 prior to the Consultant Obstetric unit closing in January 2015.**

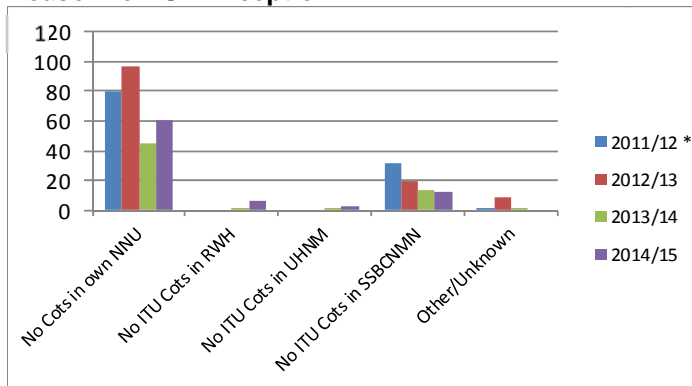

Number of IUT Exceptions

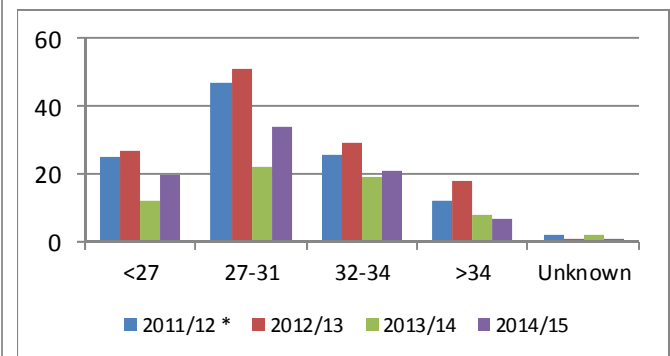

No. of IUT Exceptions by Trust

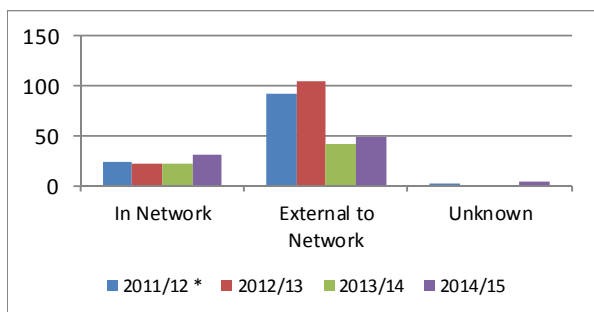

Reason for IUT Exception

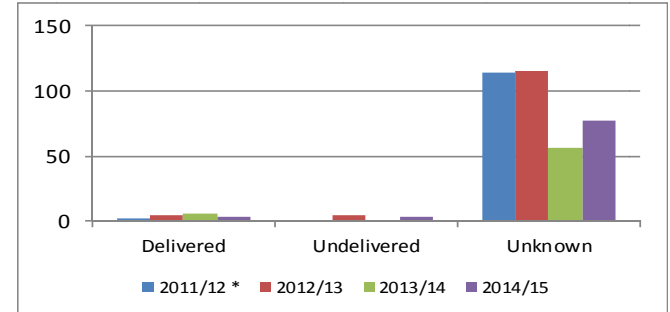

Gestation of IUT Exceptions

IUT Destination

IUT Outcome

The main reason for In Utero Transfer (IUT) exceptions to the care pathway in 2014/15 was that the neonatal unit at place of booking was full 72% of the time, 16% of the time there was no Intensive Care (IC) cots in the Network, 7% of the time there was no IC cot available at Royal Wolverhampton Hospitals NHS Trust (RWH) and on 4% of the time there was no IC cot available at the University Hospital of North Midlands NHS Trust (UHNM). Just over a third of IUT exceptions to the care pathways remain within the SSBCNMN, 58% are transferred external to the Network and for 5% the transfer destination is not recorded.

Full details of all the IUT exceptions to care pathways reported by each Trust are in Appendix 1.

Quarter	Trust	Exceptions Number	Reason	Gestation	Destination	Outcome
Quarter 1	RWH	2	NNU Full	29 34 Twins	Coventry Crewe	Did not deliver Unknown
