

Limiting Nutrition in Neonatal Palliative Care

Health professionals find limiting nutrition in neonates incredibly difficult in a palliative care setting

How do you manage hunger and thirst in a neonate?

How then can we practice this treatment modality safely in a neonatal palliative care setting

Which babies is this treatment modality used for? How long does it take for the baby to die? What about those babies who don't die?

How long does one wait?

What if the parents change their mind?

Have we harmed the baby in the process?

What does the literature say about this treatment modality in palliative care?

The authors will take participants through Good Clinical Practice Measures
